

# Green RV Innovations

The RV industry is going green with lighter-weight, more fuel-efficient vehicles built with eco-friendly materials and components designed to reduce energy consumption. Ask about these features at local RV dealers, and look for them on display at retail RV shows in your area.

- ☞ Lightweight low-profile motorhomes, aerodynamically designed for an average 15 mpg
- ☞ Diesel or gas-powered compact motorhomes on Sprinter van chassis, offering 16-20 mpg
- ☞ Motorhomes and travel trailers built with all-composite and recycled materials
- ☞ Downsized yet spacious lightweight travel trailers to tow with smaller trucks, SUVs, crossovers and minivans
- ☞ Ultra lightweight, composite construction folding camping trailers that can even be towed with compact cars
- ☞ Solar and hybrid systems to reduce generator use and noise
- ☞ Solar awnings
- ☞ LED light fixtures
- ☞ Lighter weight appliances, from water heaters to furnaces and ranges, to reduce fuel consumption
- ☞ Energy Star rated appliances and sealants
- ☞ Green textiles
- ☞ Eco-friendly and sustainable yet durable bamboo flooring
- ☞ Eco-friendly holding tank chemicals
